

Have you tried a V8?

HP-VS8Z

1. ***Sharper***

More aggressive bevel angle (64 degrees) on the precision ground blades (most pruners use 50 degrees).

2. ***Superior cutting leverage***

Offset blade angle to maintain natural hand strength.

3. ***Expert hardening***

No one hardens blades better than ARS. Edges are not only sharper, but keep their edge longer.

4. ***Expert blade treatment***

Blades are hard chrome plated to keep rust, dirt, and sap buildup away.

5. ***True single handed operation***

Squeeze the handles to open. Easy to close.

6. ***Ergonomic design***

Simple solid die cast aluminum construction is shaped to fit the hand perfectly. Lighter weight, better balanced, and longer lasting.

7. ***High quality spring***

Full wire-coil spring is anchored - no popping out!

8. ***Easy Maintenance***

Frequent tightening of centerbolts is not required. Centerbolt is specially hardened to prevent spreading. Blade set and spring are easily replaced using a screwdriver.
