

# LONG REACH PRUNERS

## What are the differences between the Long Reach Pruner Series R, L, and ZR?

### **R-Series                      LIGHTEST WEIGHT—EASIEST TO MANEUVER**

This is the lightest weight long reach pruner. A great choice for basic pruning jobs. Cutting Capacity: 1/2". Available in 4' and 6' lengths with either the cut-and-hold or razor edge head. (There are also 1' and 2' versions available with the cut-and-hold head)

### **L-Series                      HEAVIER DUTY—CUTS UP TO 3/4"**

This is the heavy duty long reach pruner. Use this pruner when larger cutting capacity is needed - up to 3/4" branches. Available in 4', 6', and 7' fixed lengths. Razor Edge Head only.

### **ZR-Series                      TELESCOPING UNITS—LONGEST REACH (10 FEET)**

A great choice when extra length is needed. These units offer variable lengths with a single unit. There are 2 sizes: the 203 telescopes from 4'-7' and the 305 units extend from 6'-10'. Both are available with Razor edge, cut-and-hold, or Shearing Heads.
